European OpenSource

Open code, shared future!

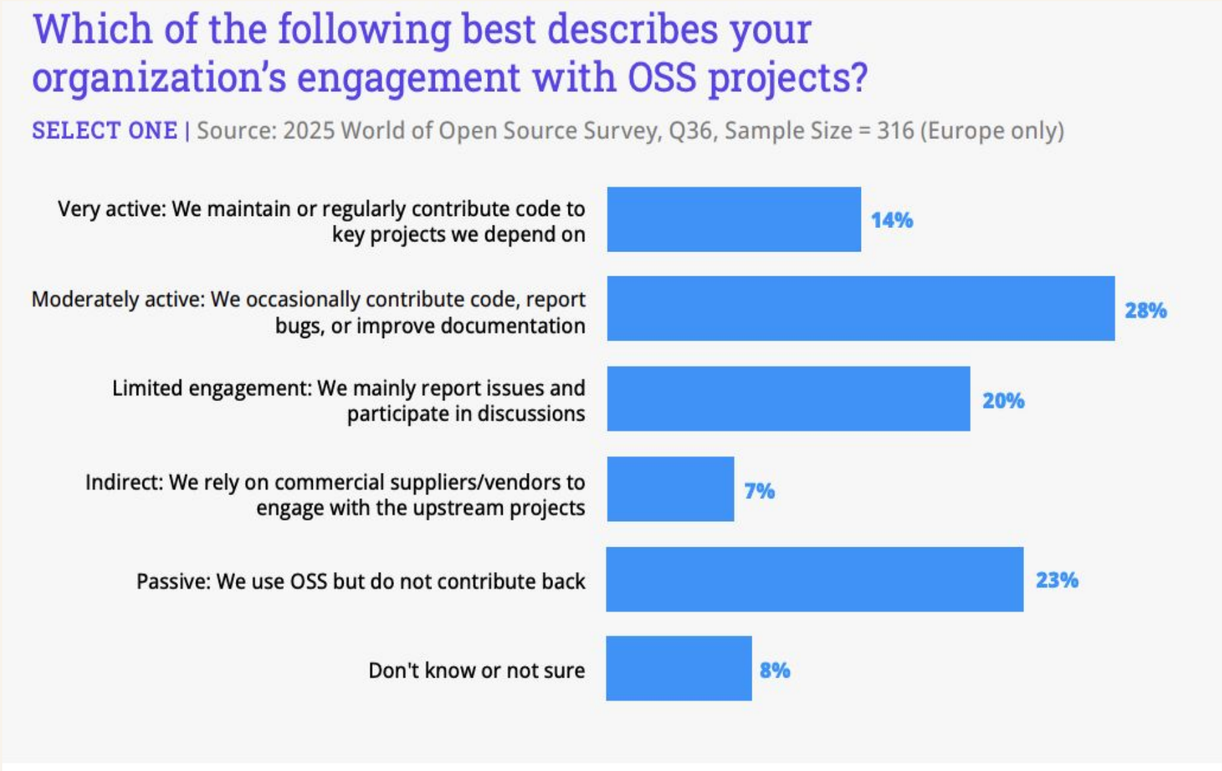
Real problems



** Graph extracted from page 11 of the report: Open Source as Europe's Strategic Advantage*

01 Fragmentation

Maintainers are isolated and companies and communities are not cohesive. In the European technology ecosystem there is a lack of reference points.

02 No vision and awareness

Companies do not perceive the return on investment (ROI) from using and contributing to open-source software. There is still a misconception that open source software is free.

03 Security and supply chain

Companies do not have full control over private software, which puts them at risk of vendor lock-in. In addition, they lack visibility into the lifecycle and dependencies of open projects.

Current situation

Market cap

Open Source is a real economic force: $35–45B in 2025, projected to reach $80–90B by 2030. It is already used in about 96% of codebases.

Europe’s actions

Europe is still behind, but the direction is changing. Cross-border collaboration is accelerating through new consortia, foundations, and public-private partnerships. Policy signals are also getting clearer: call for an EU Open Source.

Digital sovereignty

DORA, NIS2, and the CRA raise corporate responsibility for supply chain security. Sovereignty is not about closing markets, it is about reducing lock-in through active Open Source adoption and support.

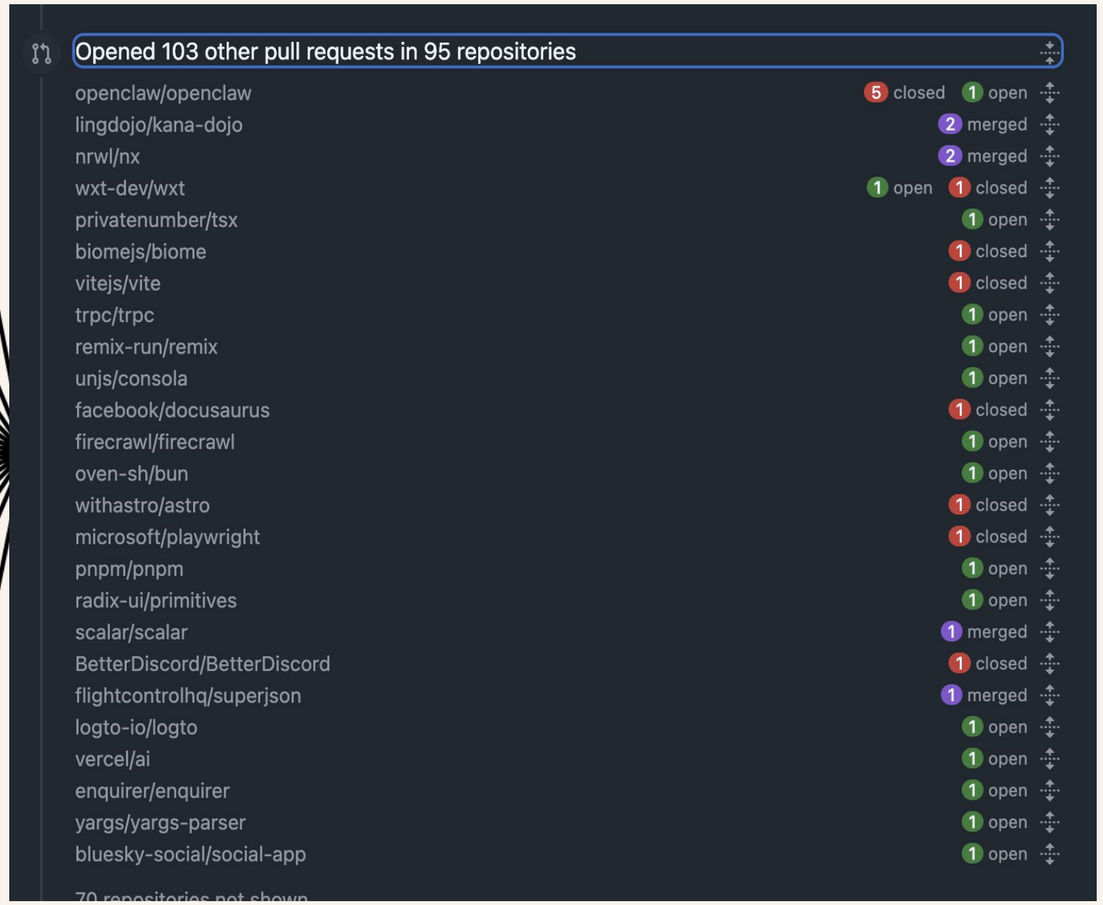
AI Slopageddon



** Agent AI GitHub profile: https://github.com/kaigritun*

Positive Impact

AI is already improving day-to-day Open Source maintenance. It helps teams handle issues and PRs faster, shortens debugging time, and removes repetitive workload so maintainers can focus on higher-value work.

Emerging Risks

AI is introducing structural pressure on the ecosystem:

- More teams generate one-off code instead of reusing shared libraries, which increases fragmentation.
- Repositories are seeing more low-quality AI-generated issues and PRs (“AI slop”), creating noise, review fatigue, and higher security risk.

European OpenSource

Our Mission

Building a platform to unite the European open-source ecosystem by connecting those who build, fund, and adopt open technology. We work for a free and independent Europe.

Our Vision

We envision a world where technology serves as a means, grounded in freedom, to help build a more just and equitable society

My 2 cents

Philosophy

We're living through the birth of a new discipline. Ninety years sounds like forever to us, but it's nothing in human history.
What matters is how we think about it, debate it, and use it to build something better.

Human rights

Technology makes sense when it brings freedom, connection, and fairness to society. Profit is a consequence, not the goal.
Let’s put ethics and human rights back at the center
